

Resilience by Design

Reactivating traditional urban settlements
through integrated design, planning and building strategies

Nepal 2016

ASF-UK's RbD programme, ASF Nepal and UN-Habitat are launching a call for a multidisciplinary* group of volunteers to support the ongoing post-earthquake reconstruction process in Bungamati, a badly-damaged historic town in the Kathmandu Valley with a wealth of traditional architecture, public spaces, heritage and cultural legacies.

Volunteers will learn and work alongside the residents and 15 community architects and engineers, by co-designing reactivating strategies for three neighbourhood clusters in Bungamati, focusing on design, planning and building techniques. Each cluster is composed by distinct housing typologies, social and spiritual public spaces, as well as cultural practices. The strategies will then be discussed with the municipality and the different stakeholders involved in the larger reconstruction programme of the Kathmandu Valley.

We are opening a selection process for **3 Volunteer positions** in Nepal available **after** the workshop, working with ASF Nepal and the RbD team to develop the projects towards implementation. **Accommodation and meals will be provided!** More info and application process: resiliencebydesign@asf-uk.org

Deadline 4th July, to apply, contact:
resiliencebydesign@asf-uk.org

RbD Nepal 2016 is part of RIBA CPD Providers Assessed Material and RIBA CPD Core Curriculum

Where & when?
Kathmandu, Nepal
10th-23rd Sept

***Who?** Architects, engineers, planners and related built environment practitioners and researchers.

How much? £800 [includes meals, accommodation & travel during the workshop. Flights & airport pick-up not included].
