# RESPONSIVE CITIES URBANISM IN THE EXPERIENCE AGE

**SEPTEMBER**  
**16TH - 17TH 2016**

*The Responsive Cities Symposium, Urbanism in the Experience Age is one of the main activities carried out under the Knowledge Alliance for Advanced Urbanism - KAAU ([www.ka-au.net](http://www.ka-au.net)) EU co-funded project. Based on the assumption that the increasing availability of data creates new opportunities, not only for monitoring and management, but also changing the way we describe, understand and design cities, KAAU seeks to promote the innovative education and training that emerging technologies require, developing courses, symposia, as well as an educational and training platform.*

*The symposium is organised by*

**Iaac** | Institute for  
advanced  
architecture  
of Catalonia | BARCELONA

*In cooperation with*

## CALL

Over the last decades a new generation of cities and new city-planning paradigms have emerged. Urban development leaders and governments throughout the world have begun to consider innovative systems, driven by information and communication technologies, to be critical drivers with which to face today's urban challenges. Cities have started to invest in technology through the implementation of new transport management systems, water and contamination monitoring systems, smart energy grids and energy efficient buildings, to name a few.

The intelligent systems and devices have formed a new hidden layer, enhancing performances, but basically remaining separate from the city's materiality and spatiality. This hidden layer took the name of Smart City, the expression of the Information Age, a period dominated by the accumulation of information, its organization, and transmission through centralized monitoring systems or desktop computers.

The Information Age saw the role of architects and urbanists in generating visions for the city's future start to fade and the Smart City

was theorized, described and developed by IT companies, who dominated the knowledge and access in technological advancements.

Today's advances create a scenario where technology has started to be embedded in our everyday life in such ways that it is becoming part of our bodies and surrounding environment, hence overcoming the desktop era. Architecture transforms into an evolutionary organism, able to react in real time to various data, finally questioning the solid principles of durability, stability or longevity.

Wearable and virtual reality technologies allow us to relate to each other and with the environment at augmented levels. New softwares and hardwares expand the possibilities of the internet of things, connecting object and users in spatial experiences: spaces are interacting with our body and neuro data, and building skins are becoming hyper connected interfaces. At the same time, DIY and open source cultures push towards the democratization of technologies and production means, bringing them closer to users, allowing them to actively participate through an experiential peer-to-peer learning and making process.

## URBANISM IN THE EXPERIENCE AGE

These epochal changes bring us to question, imagine and try to describe what is coming after the Information Age, when technology is not just a catalyst, but the foundation for social interaction. The day that internet connection will truly be democratized for every person on the planet, and technology will be deeply embedded and integrated into objects, human bodies and space, the debate for technology per se will end, finally opening the way to deeper social, spatial and learning synergies.

The Information Age is giving way to an Experience Age, characterized by high levels of physical interaction and emotional involvement. What are the new aspects and factors of spatial performance and user actions within such a shift? How will emerging communication and inter-communication models in agglomerations affect their urban environments?

In this context, the Urbanism in the Experience Age Symposium claims a renewed active role for architects: the objective is to go beyond the limitations of the "Smart City" vision, investigating "Advanced Urbanism", intended as the practice of designing and planning receptive and reactive spaces, rather than the

mere application of technological systems. Such a vision requires to rethink our design tools and planning processes, as well as the invitation to revise the educational models surrounding urban sciences.

The city planned following the Advanced Urbanism paradigm is a Responsive City that, through new communication protocols and design approaches, becomes an adaptive, emotional and experiential environment, able to hyper-connect and process information, changing its shape and performance according to the contingencies.

The symposium is organized around the following topics:

**design** - designing intelligence | physical and digital merge | new interfaces

**share** - open innovation | citizen participation | ethical cities | sharing economies

**adapt** - resilience | programmable matter | dynamic ecologies

**experience** - gaming | hyper cities | augmented reality

**learn** - new educational models | making | research innovation

## DETAILS

### DEADLINES

Opening of Call: June, 6th 2016  
Papers and projects submission: July, 15th 2016  
Participants selection: July, 30th 2016  
Symposium: September, 16th – 17th 2016

### HOW TO APPLY

Language: English  
It is possible to submit papers or realized projects

Papers: Papers should be max 3,000 words (including references, excluding abstract). Images must be jpeg, min. 300 dpi. Papers should include the following information: title, author/s, affiliation, session (design/ share / adapt / experience / learn), short abstract of 200 words, reference. Every Paper must be sent both in .doc and .pdf formats. Please find the paper layout at the following link: <http://responsivecities.iaac.net/>

Projects: Projects must be realized by the person/people submitting. They have to be presented in one A1 poster, vertical format, including title of the project, author/authors, year of realization, text illustrating the main features of the project, drawings/pictures. Please find the poster layout at the following link: <http://responsivecities.iaac.net/>

Copyright: all parts of the submitted material (including text and photographs), must be either authored by the person/people submitting, or must have the rights to use and publish them.

Please send your submissions to [info@ka-au.net](mailto:info@ka-au.net) using the following e-mail subject: Application to RC call

### SELECTION

Papers will undergo peer reviews and accepted papers will be published in the conference proceedings. All contributions will be collected in a digital publication with an ISSN code.

### FEES

Senior 150,00 € / Junior 80,00 €  
Note: over 40 are considered Senior

### HOW TO PAY

Selected submitters have to pay the fee by the 1st of September 2016 by bank transfer to the following bank account:

Bank: Banco Santander  
Agency: 6784  
Address: Via Augusta, nº182 (Es 08021 Barcelona)  
Holder: Institut d'Arquitectura Avançada de Catalunya  
IBAN: ES04 0049 6784 3028 1615 5128  
BIC/SWIFT: BSCHEMMXXX

### ORGANIZATION

General Chair: Areti Markopoulou  
Program Chairs: Chiara Farinea & Mathilde Marengo
