

Berlin International

**SUMMER SCHOOL 2025**

**“On Water”**

## Berlin International SUMMER SCHOOL

**JULY 18 - AUG 01 2025**

### Objectives

BI Summer School aims to establish a new model of design research by developing short intensive workshops that investigate contemporary socio-urban issues and speculate possible solutions that can be implemented in the near future.

We will use the city of Berlin as a vibrant laboratory for urban research. Participants from all over the world will work closely together with invited critics, and receive inputs from local experts.

In a short, two-week-span, we will question the status-quo and prototype design ideas that will be assembled and presented as an Exhibition with an accompanying Publication.

### Summer 2025: “ON WATER”

“On Water” alludes to the systems that connect different parts of the city and structuring the intricate ebbs and flows of people, culture and commerce animating the urban spaces that we inhabit. This topic puts forth the critical role that ecology and natural resources play in our cities. “Water” is essential and finite, amorphous yet heavily controlled.

This two week program in July 2025, together we will investigate the role of “Water” in shaping Berlin and other contemporary cities and unravel its potential.

**APPLY NOW!**  
**until MAY 31st**

### Key Info:

Language: **English**  
Duration: **14 Days**  
Credits: **3 ECTS**

### Fees:

**600€ for Early bird** - until April 15  
**700€ for Normal Ticket**
